Bulk Raw Manure & Composts

Biologically inoculated

A large, conical pile of dark brown, textured material, likely manure and compost, is the central focus of the image. The pile is situated in a large, industrial-style warehouse with a high ceiling and several bright, rectangular skylights. The lighting is dramatic, with a strong light source from the left creating a bright glow and casting long shadows. In the background, there are metal structures, possibly conveyor belts or storage racks, and a piece of machinery. The overall atmosphere is industrial and focused on the product being advertised.

Bulk Raw Manure & Composts

Commencing the manufacture of its organic fertilisers in 1988, Neutrog has since grown to become the largest manufacturer of its kind in Australia.

Australian owned, Neutrog's manufacturing facility is located on a 20 hectare site at Kanmantoo in South Australia.

This location is within one of the primary poultry growing regions in Australia providing Neutrog with easy access to large quantities of its core raw material – poultry manure.

As the largest consumer of poultry manure in the country, Neutrog is able to offer a range of poultry manure based products at very competitive prices – from bulk raw and composted poultry manure, to a range of composted products whose formulations have been specifically developed to meet the needs of commercial growers who rely upon optimum product performance to earn their living.

Bulk Raw Poultry Manure

Raw poultry manure can either be sourced from a Neutrog bulk holding facility or direct from the poultry sheds. Whilst sourcing direct from the poultry sheds is the most cost effective means of sourcing raw poultry manure, to do so farmers and growers must be prepared to take delivery of the raw manure when the poultry sheds are being cleared out.

To gain a bulk raw manure quote from Neutrog simply advise a Neutrog representative of the quantity required and the ideal timing for such and we will advise you of the price and availability.

Inoculated Composts

All organic raw materials utilised in Neutrog's composts are subjected to a unique composting process which aids in optimising the natural microbiology. This process stabilises the nutrients, maximises nutrient availability and ensures the composts are free from any pathogens, parasites or weed seeds.

During processing each compost is biologically inoculated with beneficial microbes.

Importantly, each compost is screened allowing for more uniform nutrient application and hence more efficient use of the compost.

Neutrog offers 3 standard biologically inoculated composts:

Nincompoop

Biologically inoculated poultry manure compost.

Humungus

Biologically inoculated poultry manure humus, composted with added carbon and humic acid.

SeaDo

Biologically inoculated poultry manure based compost, with added seaweed.

Available in bulk

Neutrog is also able to custom manufacture composts to meet farmers and growers specific requirements.
