

APRIL in the GARDEN with Neutrog

April Birth Flowers

Just like birthstones, birth flowers are symbolic of the month we're born in, and each one carries a special meaning. The common birth flower for April is the Common Daisy, and the native birth flower is the Emu Bush.

Common Daisy

Bellis Perennis

The simplicity of daisies with their characteristic round centre, radiant petals and vibrant colours just seems to be a symbol of happiness.

Daisies are an easy plant to grow and maintain. If you're planting daisies, they will benefit from a slow release fertiliser like **Seamungus** incorporated into the soil and then be sure to

keep the water up to them over the first couple of years as their root system develops and adding **GOGO Juice** regularly will also support healthy root growth. Just be cautious not to over water as they don't like soggy soil. Once established, fertilise with **Sudden Impact for Roses**.

Emu Bush

Eremophila sp.

The colour and texture of this unique Australian plant is a rather irresistible combination that has made this a popular garden plant for enthusiasts.

Eremophila is a great choice for drier areas and require good drainage and a sunny spot.

The planting hole should be twice as wide and the same depth of the root ball, and before placing in the hole gently tease the roots. Backfill with soil, water well with **GOGO Juice** and mulch with **Whoflungdung** making sure to keep a gap around the base of the plant. Fertilising *Eremophila* with **Bush Tucker** is ideal as it will encourage flowering and vigorous growth.

Planting in April

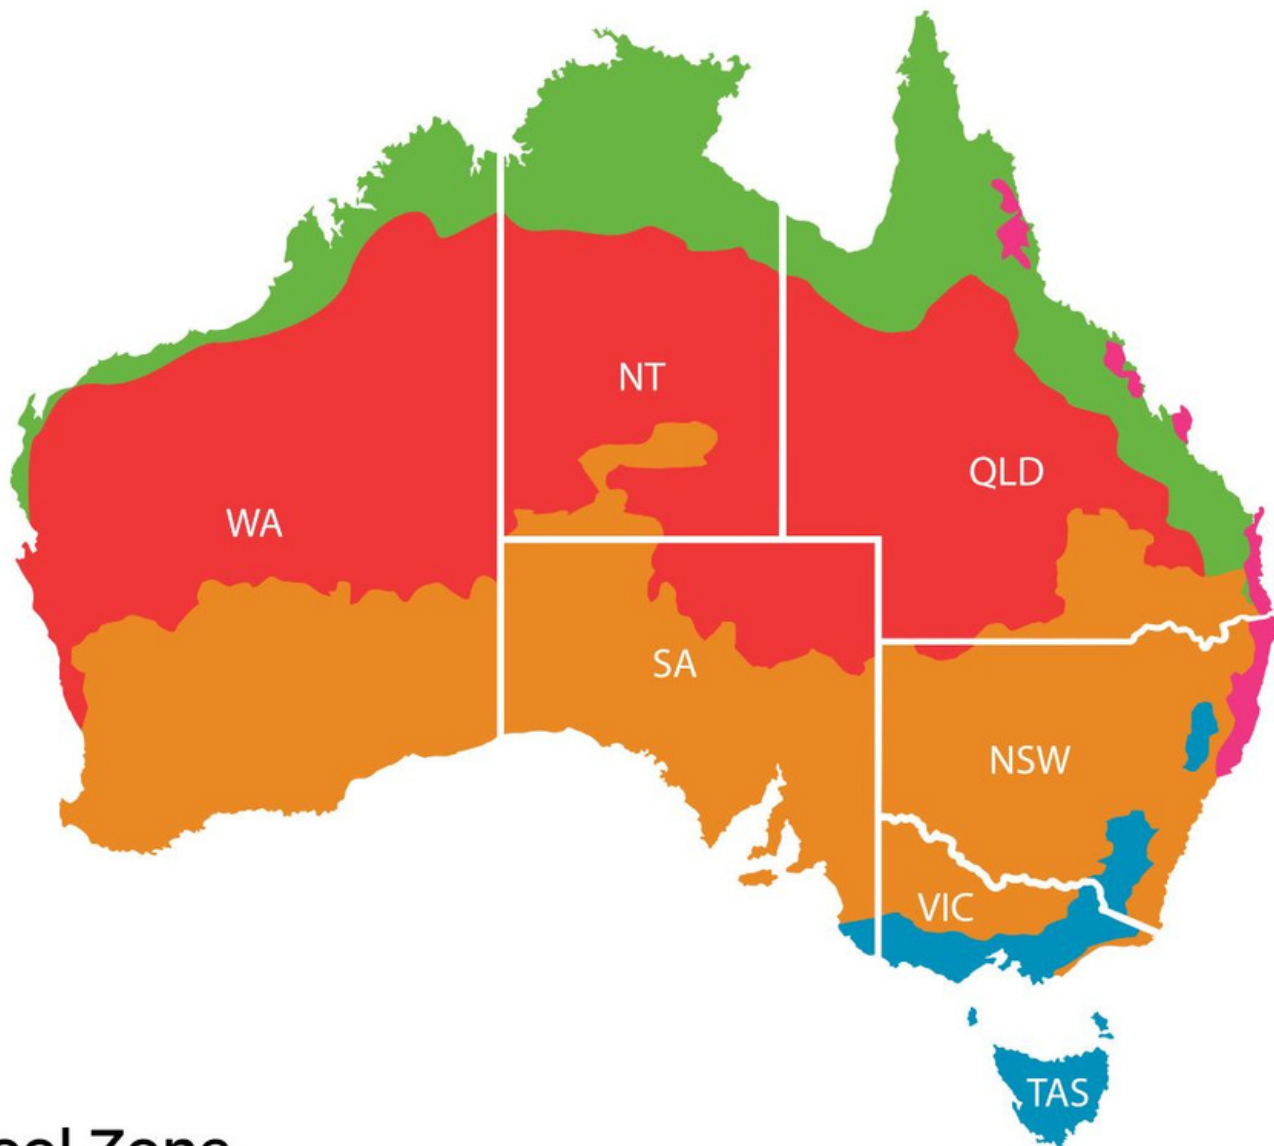

Autumn is a great time to spruce up your garden with some new plants, and you can give them the best start in their new home with our planting trifecta - **Seamungus**, **GOGO Juice** and **Whoflungdung**.

Incorporate **Seamungus** pellets into the loose soil before planting and water it in well.

Once your plant is in place and you have backfilled the planting hole, add another handful of **Seamungus** pellets on top of the soil and water in well with **GOGO Juice**. These products contain seaweed, which will help overcome transplant shock.

Finish by mulching with **Whoflungdung** to protect the plants' roots, retain moisture in the soil and regulate temperature.

Cool Zone

includes Melbourne, Tasmania & cool highlands

Fruit & Vegetables

- | | |
|-----------------|--------------|
| Beetroot | Spring Onion |
| Broad Bean | Swede |
| Cabbage | Turnip |
| Carrot | |
| Cauliflower | |
| Chinese Cabbage | |
| Citrus | |
| Shallot | |
| Silver beet | |
| Spinach | |

Herbs

- Chives
- Coriander
- Garlic

 Carnation
 Cockscomb
 Coleus
 Dahlia
 Gaillardia
 Gerbera
 Sunflower
 Torenia
 Verbena

Fertilising in April

Year round fertilising for year round health!

Like humans and animals, plants require regular feeding throughout the year - at least once in each season.

Happy, healthy, well nourished plants are more resistant to pests, diseases, heat stress and frost.

Add to Your Compost Bin

As autumn leaves drop, gather them and add to your compost bin. Apply GOGO Juice to assist your compost in the breaking down process.

Time to Plant

There's still time to plant spring flowering bulbs which are now available at your garden centre.

Add Rapid Raiser throughout the soil. In the spring, once they've finished flowering, is the best time to fertilise as that's when the bulb will store nutrition for the following seasons' flowers.

Feed Now for a Strong Lawn

Fertilise your lawns now with Sudden Impact for Lawns with POPUL8. This will allow your lawn to be strong, vigorous and healthy as we head into the cooler months, thus assisting it to cope during winter.

Time to Plant Sweet Peas

Sweet Peas are traditionally planted on St.

Patrick's Day. There's still plenty of time to get them in. With so many varieties to choose from, the only problem will be which do you go for!

Remember to have a light application of garden lime running along side your row of seeds. This will allow the roots to grow down into the lime. Once established a fortnightly feed with **Strike Back for Orchids** liquid, will ensure a stunning display.

Fertilise Your Citrus

Fertilise your citrus now. Citrus are heavy feeders and will respond well to an application of **Gyganic for Veggies Fruit & Citrus** – again, water this in well using **GOGO Juice** so that the beneficial bacteria and fungi can assist the plants in accessing nutrition and water.

Prepare for Winter Plantings

Prepare garden beds for your winter plantings of roses, fruit trees and ornamentals. Incorporate **Seamungus** throughout the soil and water in with **GOGO Juice**. The two products together will ensure an excellent take up of nutrition when your plants go into the ground.

Grow Some Garlic

Plant garlic and other winter vegetable crops. Add **Human Beans** throughout the garden bed. The composted poultry manure and composted coffee grounds is an excellent combination, ensuring a great result for your veggies. Water in well using **GOGO Juice**.

Relocate Cymbidium Orchids

Traditionally, Anzac Day is when you move your cymbidium orchids into a protected, sunnier position for the winter and early spring. They will thrive with the extra light. Feed monthly with **Strike Back for Orchids** pellets. By applying fertiliser 2

months prior to planting, you will achieve the best flowering results as well as strong, vigorous plants.

Replacing Damaged Roses

If you're removing old, damaged or diseased roses and want to replant in the same area, add a generous quantity of fresh soil to where the rose was planted. Add **Seamungus** throughout the soil and water in with **POPUL8** to assist the new rose to settle back into this position.

Handy Tip!

All potted plants will need a feed to keep them thriving throughout the year.

Application rates differ depending on the size of the pot you are using, so to make it easier for you, we have put together this basic guide:

Pot Size	40"/100cm	30"/76cm	20"/50cm	12"/30cm	6"/15cm
Strike Back for Orchids:	100g	75g	50g	30g	15g
Sudden Impact for Roses:	185g	135g	85g	45g	15g
Kahoona:	185g	135g	85g	45g	15g
Seamungus:	250g	190g	125g	75g	40g
Bush Tucker:	150g	115g	75g	45g	25g
