

NOVEMBER

IN THE GARDEN WITH NEUTROG

NOVEMBER BIRTH FLOWERS

Just like birthstones, birth flowers are symbolic of the month we're born in, and each one carries a special meaning. Chrysanthemum is the birth flower for November and the native birth flower is Flannel Flower.

CHRYSANTHEMUM

Chrysanthemums, also known as 'mums', are planted for their spectacular blooms that come in a wonderful variety of colours and shapes.

Plant your chrysanthemums in spring to allow the plant to establish a strong root system before the first frost for your area.

Plant them in well draining, evenly moist soil in an area that receives full sun. Once established, fertilise them throughout the growing season with **Sudden Impact for Roses** if planted in the ground, or **Strike Back for Orchids** if planted in pots. Water all applications in well, and apply **COCO Juice** fortnightly for the best results.

FLANNEL FLOWER

Native to the bushlands around Sydney, Flannel Flowers are an iconic Australian native with velvety white petals.

They grow best in full sun or part shade in most areas of Australia except for the tropics and can be planted into the ground or in pots.

When planting, be sure to not disturb the roots too much. Flannel flowers are prone to fungal diseases, so regular applications of biological fertiliser like **Bush Tucker** and soil pro-biotics like **GOGO Juice** is recommended to ensure your plant thrives.

Finish with a layer of **Whoflungdung** to protect the sensitive root system, especially in summer.

PLANTING IN NOVEMBER

Now is the time to be planning the summer application for your Year Round Feeding Programme. Like humans and animals, plants require regular feeding throughout the year – at least once each season. Happy, healthy, well-nourished plants are more resistant to pests, diseases, heat stress and frost.

All gardens will benefit from applications of **Seamungus**, **GOGO Juice** and **Whoflungdung** to ensure a biologically active base for plants to thrive in. With plenty of great fruits, vegetables, herbs and flowers to plant now, a boost of microbiology will reward gardeners with plants that are protected a resilient against stress, pests and diseases.

FERTILISING IN NOVEMBER

**Year round
fertilising for
year round
health**

Like humans and animals, plants require regular feeding throughout the year – at least once in each season.

Happy, healthy, well nourished plants are more resistant to pests, diseases, heat stress and frost.

BLUEBERRIES

Blueberries will be forming on plants now. Feeding with **Kahoona** now will ensure lots of fruit.

Kahoona has been specifically developed to enhance the growth and flower development of all acid loving plants including blueberries, camellias, gardenias, azaleas and rhododendrons.

PERENNIALS

Fertilise summer flowering perennials such as Gaura, Salvia and Penstemon with **Sudden Impact for Roses**.

A fortnightly application of **Sudden Impact for Roses Advanced Biological Formula** will keep them vibrant for many months over summer.

FRUIT TREES

Fruit trees & citrus which were fed with **Cyganic for Veggies, Fruit & Citrus** in early spring, will be ready for their summer application.

Apply **Cyganic** around the drip line. Water in well with **POPUL8**.

LAWNS

Plan for your summer lawn feed. **Seamungus Lawn** or **Blade Runner** will assist your lawn greatly in coping with the warmth of summer. **Seamungus** will hold up to 70% of it's own weight in moisture once it breaks down and **Blade Runner** has added bacteria and fungi which helps the soil to hold moisture.

NATIVE HEDGES

If you have a native hedge, such as Westringia, Dodonea and Grevillea, then they will thrive on an application of **Bush Tucker**.

This will assist them greatly during the heat of summer.

ORCHIDS

We'd all love lots of flowers on our orchids. Later flowering cymbidium orchids will benefit from an application of **Strike Back for Orchids**. Apply fortnightly with the liquid form and monthly with the pelleted form. This will encourage stronger flower spikes as well as more flower spikes.

NEUTROG POT GUIDE

All potted plants will need a feed to keep them thriving throughout the year.

Application rates differ depending on the size of the pot you are using, so to make it easier for you, we have put together this simple guide.

| Pot Size | 40"/100cm | 30"/76cm | 20"/50cm | 12"/30cm | 6"/15cm |
|--------------------------|-----------|----------|----------|----------|---------|
| Strike Back for Orchids: | 100g | 75g | 50g | 30g | 15g |
| Sudden Impact for Roses: | 185g | 135g | 85g | 45g | 15g |
| Kahoona: | 185g | 135g | 85g | 45g | 15g |
| Seamungus: | 250g | 190g | 125g | 75g | 40g |
| Bush Tucker: | 150g | 115g | 75g | 45g | 25g |
| Gyganic: | 185g | 135g | 85g | 45g | 15g |
| Human Beans: | 250g | 190g | 125g | 75g | 40g |
