

APRIL IN THE GARDEN

With autumn settling in nicely with cooler mornings and evenings, there is still plenty of warmth in the soil for those who want to add new plants to the garden. This guide includes a fantastic selection of fruits, vegetables, herbs and flowers that can be planted in each climate zone throughout April, so use your time wisely to get the most out of your garden for the seasons ahead.

APRIL BIRTH FLOWERS

COMMON DAISY

The simplicity of daisies with their perfect round centre, radiant petals and vibrant colours seems to be a symbol of happiness.

Daisies are an easy plant to grow and maintain. If you're planting daisies, they will benefit from a slow release fertiliser like **Seamungus** incorporated into the soil, and then be sure to keep up the water over the first couple of years as their root system develops. Apply **GOGO Juice** regularly to support healthy root growth.

Once established, fertilise with **Sudden Impact for Roses** pellets or liquid.

EMU BUSH

The colour and texture of this unique Australian plant is a rather irresistible combination that has made this a popular garden plant for enthusiasts.

Emu Bush is a great choice for drier areas and require good drainage in a sunny position.

The planting hole should be twice as wide and the same depth of the root ball, and before placing in the hole, gently tease the roots. Backfill the hole with soil, water well with **GOGO Juice** and mulch with **Whoflungdung**.

Fertilise your plant with **Bush Tucker** pellets or liquid to encourage flowering and vigorous growth.

APRIL FERTILISING GUIDE

Year round fertilising for year round health

Like humans and animals, plants require regular feeding throughout the year – at least once in each season.

Happy, healthy, well nourished plants are more resistant to pests, diseases, heat stress and frost.

PLANT SPRING FLOWERING BULBS

There's still time to plant spring flowering bulbs which are now available at your garden centre.

Add **Rapid Raiser** throughout the soil. In the spring, once they've finished flowering, is the best time to fertilise as that's when the bulb will store nutrition for the following seasons' flowers.

FEED YOUR CITRUS

Now is the time to fertilise your citrus trees.

Citrus are heavy feeders and will respond well to an application of **Gyganic for Veggies, Fruit & Citrus**. Water in well with **GOGO Juice** so that the beneficial bacteria and fungi can assist the plants to access nutrition and hydration.

PREPARE FOR WINTER PLANTING

Prepare garden beds for your winter plantings of roses, fruit trees and ornamentals.

Incorporate **Seamungus** throughout the soil and water in with **GOGO Juice**. The two products together will ensure an excellent take up of nutrition when your plants go into the ground.

REMOVING ROSES

If you're removing old, damaged, or diseased roses and want to replant in the same area, add a generous quantity of fresh soil to where the rose was planted.

Add **Seamungus** throughout the soil and water in with **POPUL8** to assist the new rose to settle back into this position.

ORCHIDS

Traditionally, Anzac Day is when you move your cymbidium orchids into a protected, sunnier position for the winter and early spring. They will thrive with the extra light. Feed monthly with **Strike Back for Orchids** pellets. By applying fertiliser two months prior to planting, you will achieve the best flowering results as well as strong, vigorous plants.

WINTER VEGETABLES

Plant garlic and other winter vegetable crops.

Add **Human Beans** which is coated with **POPUL8** throughout the garden bed. The composted poultry manure and composted coffee grounds is an excellent combination, ensuring a great result for your veggies. Water in well using **GOGO Juice**.

LAWNS

Aerate your lawn now to improve soil structure to allow better water and fertiliser penetration.

Fertilise now with a balanced fertiliser rich in nitrogen like **Sudden Impact for Lawns + POPUL8** to promote root growth and strengthen the grass for winter resilience.

NATIVE PLANTS

There are a lot of natives that flower during autumn which means supporting them with a good fertiliser, in advance of that flush of flowers.

Bush Tucker liquid is a great one for feeding plants that need an immediate boost and can be used in conjunction with the pellets.

POTTED PLANT FERTILISING GUIDE

All potted plants will benefit from year round fertilising to keep them thriving throughout each season. Application rates differ depending on the size of the pot you are using, so to make it easier for you, Neutrog have put together the basic guide below.

Pot Size	40"/100cm	30"/76cm	20"/50cm	12"/30cm	6"/15cm
Strike Back for Orchids:	100g	75g	50g	30g	15g
Sudden Impact for Roses:	185g	135g	85g	45g	15g
Kahoona:	185g	135g	85g	45g	15g
Seamungus:	250g	190g	125g	75g	40g
Bush Tucker:	150g	115g	75g	45g	25g
Cyganic:	185g	135g	85g	45g	15g
Human Beans:	250g	190g	125g	75g	40g

APRIL PLANTING GUIDE

Whether your adding new plants to the garden, reviving the soil after removing sick plants or simply preparing your garden for the season ahead, all gardens will benefit from our 'trifecta' of GOGO Juice, Seamungus and Whoflungdung to ensure a biologically active base for plants to thrive in.

With plenty of great fruits, vegetables, herbs and flowers to plant now, a boost of microbiology will reward gardeners with plants that are resilient to stress, pests and diseases.

COOL ZONE: Melbourne, Tasmania and Cool Highlands

FRUIT & VEGETABLES

Beetroot	Swede
Broad Bean	Turnip
Cabbage	
Carrot	
Cauliflower	
Chinese Cabbage
